Subject: RE:

It appears that there are still multiple inventions within the elected invention I. Claims 1 - 14 are clearly directed to a polymer which should be examined in TC 1700. Claims 21 - 23 are methods of using the polymer to deliver medicaments which my art unit 1616 would examine in class 424. Claims 27-38 are directed to a method for attaching cells to a solid substrate which would be classified in 435/?. Since this is a 371 case which requires that you follow lack of unity practice, the case should probably be examined in 1700 because the first invention belongs there??? Sorry, but I can't be of more help.
